A digital elevation model (DEM) is a 3D CG representation of a terrain's surface – commonly of a planet (e.g. Earth), moon, or asteroid – created from a terrain's elevation data. A "global DEM" refers to a Discrete Global Grid

### **Digital elevation model - Wikipedia**

USGS elevation program, which for many years concentrated on production of topographic map quadrangle-based digital elevation models. The NED serves as the elevation layer of The National Map, and provides basic elevation information for earth science studies and mapping applications in the United States.

### **The National Map – Elevation - USGS**

A digital elevation model (DEM) is a digital representation of ground surface topography or terrain. It is also widely known as a digital terrain model (DTM). While the term can be used for any representation of terrain as GIS data, it is generally restricted to the use of a raster grid of elevation values.

2 ASTER Global Digital Elevation Model. NASA and Japan's joint operation was the birth of Advanced Spaceborne Thermal Emission and Reflection Radiometer (ASTER). As part of this project emerged the ASTER Global Digital Elevation Model (GDEM). ASTER GDEM boasted a global resolution of 90 meters with a resolution of 30 meters in the United States.
