### **RADIATION PROTECTION AND SAFETY IN INDUSTRIAL RADIOGRAPHY**

Iridium is a chemical element with symbol Ir and atomic number 77. A very hard, brittle, silvery-white transition metal of the platinum group, iridium is the second-densest metal (after osmium) with a density of 22.56 g/cm<sup>3</sup> as defined by experimental X-ray crystallography. However at room temperature and standard atmospheric pressure, iridium has a density of 22.65 g/cm<sup>3</sup>, 0.04 g/cm<sup>3</sup> higher ...

Industrial radiography is a method of non-destructive testing where many types of manufactured components can be examined to verify the internal structure and integrity of the specimen. Industrial Radiography can be performed utilizing either X-rays or gamma rays. Both are forms of electromagnetic radiation. The difference between various forms of electromagnetic energy is related to the wavelength.

Deterministic modeling process is presented in the context of linear programs (LP). LP models are easy to solve computationally and have a wide range of applications in diverse fields. This site provides solution algorithms and the needed sensitivity analysis since the solution to a practical problem is not complete with the mere determination of the optimal solution.
