Why do we think we're so bad at maths, when we're all - almost all - born with brain circuits specialised for numbers? Our ability to use numbers has been the key from taking us from the Stone Age to the Phone Age. Trade, science and technology would be impossible without this ability. Neuroscientist Brian Butterworth argues that we are all born with brain circuits specialised for numbers.

The Mathematical Magic of the Fibonacci Numbers

In mathematics, the irrational numbers are all the real numbers which are not rational numbers, the latter being the numbers constructed from ratios (or fractions) of integers. When the ratio of lengths of two line segments is an irrational number, the line segments are also described as being incommensurable, meaning that they share no "measure" in common, that is, there is no length ("the ...

In mathematics, a geometric series is a series with a constant ratio between successive terms. For example, the series $1 + \frac{1}{2} + \frac{1}{4} + \frac{1}{8} + \dots$ is geometric, because each successive term can be obtained by multiplying the previous term by $\frac{1}{2}$. Geometric series are among the simplest examples of infinite series with finite sums, although not all of them have this property.
