Chemical Names and Formulas (Chapter 4) Learning to write correct formulas and the corresponding names of compounds is an essential skill in chemistry, which can take a lot of practice to master. We will also learn two ways to communicate the composition of a compound: percent composition and empirical formulas.

The mole is the unit of measurement for amount of substance in the International System of Units (SI). Effective 20 May 2019, the mole is defined as the amount of a chemical substance that contains exactly $6.022\,140\,76 \times 10^{23}$ (Avogadro's constant) constitutive particles, e.g., atoms, molecules, ions or electrons. This definition was adopted in November of 2018, revising its old definition ...

Titration, also known as titrimetry, is a common laboratory method of quantitative chemical analysis that is used to determine the concentration of an identified analyte. Since volume measurements play a key role in titration, it is also known as volumetric analysis. A reagent, called the titrant or titrator is prepared as a standard solution. A known concentration and volume of titrant reacts ...

Boltzmann's constant (k) is a universal constant that defines what we mean by one degree of temperature. It is the conversion factor that converts from degrees to conventional units of energy per particle. It is intimately related to the universal gas constant (R) which converts from degrees to conventional units of energy per mole.
