Using Color to See How Liquids Combine Can you tell a difference between liquids by the way they look when they combine with water? In this and the following activity, students will use a different method to observe another characteristic property of water, salt water, alcohol, and detergent solution.

The belt filter (sometimes called a belt press filter, or belt filter press) is an industrial machine, used for solid/liquid separation processes, particularly the dewatering of sludges in the chemical industry, mining and water treatment. Belt filter presses are also used in the production of apple juice, cider and winemaking. The process of filtration is primarily obtained by passing a pair ...

In physics, a free surface is the surface of a fluid that is subject to zero parallel shear stress, such as the boundary between two homogeneous fluids, for example liquid water and the air in the Earth's atmosphere. Unlike liquids, gases cannot form a free surface on their own. Fluidized/liquified solids, including slurries, granular materials, and powders may form a free surface.

The Argument for a Literal Interpretation of the Words of Institution. The largest branches of the Church, the Roman Catholic and Eastern Churches, interpret Jesus' words literally, that is, they contend that the verb "is" must be taken literally, as "This is my body" rather than "This signifies my body."
