Public health is "the science and art of preventing disease, prolonging life and promoting human health through organized efforts and informed choices of society, organizations, public and private, communities and individuals". Analyzing the health of a population and the threats is the basis for public health. The "public" in question can be as small as a handful of people, an entire village ...

Behavior change, in the context of public health, refers to efforts to change people's personal habits to prevent disease. Behavior change in public health is also known as social and behavior change communication (SBCC). More and more, efforts focus on prevention of disease to save healthcare care costs. This is particularly important in low and middle income countries, where health ...

These Standards of Care are based on the current scientific research on adults with and without disabilities and will be updated regularly. Please note that individuals with I/DD are under-represented in most research studies. Your feedback is important to the nutrition and health of individuals with intellectual or developmental disabilities.

Myths and Truths About Nutrition. Myth: Heart disease in America is caused by consumption of cholesterol and saturated fat from animal products. Truth: During the period of rapid increase in heart disease (1920-1960), American consumption of animal fats declined but consumption of hydrogenated and industrially processed vegetable fats increased dramatically (USDA-HNIS).
