

### **robot analysis and control pdf**

A robot is a machine—especially one programmable by a computer—capable of carrying out a complex series of actions automatically. Robots can be guided by an external control device or the control may be embedded within. Robots may be constructed to take on human form but most robots are machines designed to perform a task with no regard to how they look.

### **Robot - Wikipedia**

A humanoid robot is a robot with its body shape built to resemble the human body. The design may be for functional purposes, such as interacting with human tools and environments, for experimental purposes, such as the study of al locomotion, or for other purposes. In general, humanoid robots have a torso, a head, two arms, and two legs, though some forms of humanoid robots may model only part ...

Fig. 1. The robot reasons and acts in domestic interaction scenarios. The sources of information are

multi-modal dialogue (A) and perspective-aware monitoring of the environment and human activity (B). The robot must adapt on-line its behaviours by merging computed plans (C) with reactive control. The robot explicitly reasons on the fact that it is (or is not) observed by the human.
